Description:

How do you solve population-level health problems and develop appropriate nursing interventions?

This unique, problem-solving, case-based approach shows you how. You'll encounter three different case studies in every chapter—two in the text and one online at *DavisPlus*—that explore concepts such as community assessments, public health policy, and surveillance. Step by step, you'll develop the knowledge and skills you need to apply public health principles across a variety of health care settings, special populations, and scenarios.
